CONTAMINATION SCREENING EVALUATION REPORT

Tampa Hillsborough Expressway Authority (THEA)
Whiting Street Ultimate
Project Development and Environment (PD&E) Study
Hillsborough County, Florida
THEA Number HI-0141

Disclaimer

No contamination assessment can wholly eliminate uncertainty regarding the potential for environmental contamination in connection with a property or corridor. The information in this Contamination Screening Evaluation Report (CSER) is intended to reduce, but not eliminate, uncertainty regarding the potential for environmental contamination in connection with the areas subject to the Project Development & Environment (PD&E) Study.

Not every feature presented herein warrants the same level of assessment and must be evaluated based on the reasonableness of judgments made at the time and under the circumstances in which they were made. Subsequent evaluation should not be considered valid standards by which to judge the appropriateness of any prior assessment based on hindsight, new information, use of developing technology or analytical techniques, or other factors.

The Contamination Screening Evaluation was prepared at the request of The Hillsborough County Expressway Authority (THEA) (i.e., the User), for the purposes identified in accordance with Part 2, Chapter 20 of the PD&E Manual (2020). Use of the information contained in this CSER by anyone other than the User is permissible only with the prior written authorization to do so. THEA is not responsible for independent conclusions, opinions, or recommendations made by others or otherwise based on the findings presented in this CSER.

1.0 Project Summary

1.1 Project Description

The Tampa Hillsborough Expressway Authority (THEA), in coordination with the City of Tampa, is conducting a Project Development and Environment (PD&E) Study to evaluate the needs, costs, and effects of extending Whiting Street and reconfiguring the on-ramps of the Selmon Expressway at Jefferson Street and off-ramps at Florida Avenue and Channelside Drive. The study considers extending Whiting Street to North Meridian Avenue and includes improvements and realignment of the existing segment of Whiting Street, from Jefferson Street to North Brush Street. The extension will provide a direct connection of the Whiting Street corridor to North Meridian Avenue which will improve traffic flow and safety for all transportation modes and offer additional connections within the street network.

The study will also evaluate reconfiguring the on-ramp to the Selmon Expressway at Jefferson Street and the off-ramps at Florida Avenue and Channelside Drive. It is anticipated that the Florida Avenue off-ramp will be widened to two lanes, the Channelside Drive off-ramp will be removed, and the new Whiting Street off-ramp will extend from the Selmon Expressway, near Morgan Street, to Nebraska Avenue and intersect with the new Whiting Street alignment to provide a direct connection from the Selmon Expressway. See **Error! Reference source not found.** for the project location map.

Figure 1.1: Project Location Map

1.2 Project Purpose & Need

The purpose of this project is to provide a direct connection of the Whiting Street corridor to North Meridian Avenue to improve traffic flow and safety for all transportation modes and offer additional connections within the street network. The project will also reconfigure the on-ramps to the Selmon Expressway at Jefferson Street and the off-ramps at Florida Avenue and Channelside Drive to improve safety, traffic circulation, and access to Whiting Street and North Meridian Avenue.

The need for the project is based on the following criteria:

System Linkage

Based upon the Tampa Bay Regional Planning Model (TBRPM) Version 8.2, the existing roadway network will be over capacity by the 2045 design year. Additional network connectivity such as the Whiting Street extension and ramp reconfigurations, are necessary to provide additional route choice and access to alleviate the congestion.

Safety

Safety and operational concerns with the Florida Avenue and Channelside Drive off-ramps include a substandard radius and a free-flow merge movement onto Florida Avenue with a sidewalk/crosswalk conflict. The ramp termini onto Channelside Drive terminates into a 5-leg intersection at Channelside Drive and Morgan Street, which is a major pedestrian access point to the Amalie Arena. Six (6) years of data (2013-2018) were reviewed, and 14 crashes have occurred at this ramp. As the Water Street Project builds out to the east of the ramp system, the adverse impact of geometric issues and pedestrian conflicts are expected to be exacerbated. Also, the planned widening of the Selmon Expressway south of the downtown ramps will alleviate congestion issues and result in higher speed, higher volume interactions at this ramp. As such, improving the ramp geometry, eliminating pedestrian conflicts, and redirecting Downtown east traffic beyond the Water Street District is critical to proactively address safety concerns as both the Selmon Expressway and Downtown Tampa continue to develop.

Transportation Demand

Based upon the Tampa Bay Regional Planning Model (TBRPM) Version 8.2, Jefferson Street (39,000 AADT) and Kennedy Boulevard (AADT 34,000) are expected to reach their operational capacity by 2040. As the Water Street Project develops, the vehicle demand is expected to increase. The proposed connection of Whiting Street could carry up to 14,800 AADT, providing valuable route divergence and congestion relief to the parallel facilities.

A site plan describing the proposed roadway and interchange improvements to Whiting Street is presented in **Appendix A**.

1.3 Preferred Alternative

THEA has committed to provide a new connection to Meridian Avenue, by extending Whiting Street between Meridian Avenue and Brush Street. In order to construct the extension of Whiting Street, the existing railroad tracks will need to be removed. Removing the railroad tracks and completing the extension to Meridian Avenue will offer an additional connection within the street network, providing additional route choice and alleviating congestion.

The preferred alternative proposes improvements to existing ramp configurations and the existing street network at multiple locations in the Downtown/Channelside area. The improvements can be broken up into four distinct locations. See **Figure 1.2** for each location of proposed improvements.

Figure 1.2: Preferred Alternative Map

Location A

Whiting Street currently ends at Brush Street, west of the railroad tracks. The preferred alternative proposes to extend Whiting Street, from Brush Street to Meridian Avenue, with a new signal at the T-intersection of Whiting Street and Meridian Avenue. The proposed typical section for the Whiting Street extension includes two 11-foot wide travel lanes in each direction, a 15-foot wide raised median, curb and gutter, and 10-foot wide sidewalks on both the north and south sides of the road. The eastbound approach to Meridian Avenue includes two 11-foot wide dedicated left turn lanes and one 11-foot wide dedicated right turn lane. If necessary, the proposed 15-foot wide raised median can be converted to an additional dedicated left turn lane in the future. The existing grassed median on Meridian Avenue will be split in order to accommodate the proposed signalized intersection. The preferred alternative includes the addition of a southbound dedicated right turn lane and a northbound dedicated left turn lane. The preferred alternative does not propose any other improvements to Meridian Avenue.

Location B

Whiting Street is currently a two-lane roadway with on-street parking on both the north and south sides of the road. East of the Selmon Expressway, Whiting Street is a brick road in much need of repair. The preferred alternative proposes to widen/reconstruct Whiting Street from two to four lanes with two 11-foot wide travel lanes in each direction, curb and gutter, and 10-foot wide sidewalks on both the north and south sides of the road. The preferred alternative also includes installing two new traffic signals; one at the

intersection of Whiting Street and the terminus of the proposed Whiting off-ramp, just east of the Selmon Expressway, and the other at the intersection of Whiting Street and Brush Street. A dedicated eastbound left turn lane is proposed at the intersection of Whiting Street and Brush Street.

Location C

The existing exit ramp 6B provides users the ability to travel east along Channelside Drive, towards Amalie Arena and the Florida Aquarium. The preferred alternative proposes relocating exit ramp 6B approximately 700 feet north and providing a direct connection to Whiting Street. The proposed ramp includes a single 15-foot wide ramp lane, which will remain on structure beyond the existing Jefferson Street on ramp. From this point the ramp profile begins to decrease and the ramp will be supported by Mechanically Stabilized Earth (MSE) wall, which ends approximately 100 feet south of Whiting Street. The ramp widens to three 12-foot wide lanes at the intersection, with one dedicated left turn lane and two dedicated right turn lanes. The proposed ramp will cut off access north, along Nebraska Avenue, and therefore requires a horizontal curve to connect Nebraska Avenue to Finley Street. The existing Jefferson Street on ramp entrance will be shifted to the north to accommodate the new Whiting Street off-ramp.

Location D

The current configuration of exit ramp 6A includes a tight single lane loop ramp that merges onto Florida Avenue under a free-flow condition. The short, tight curve provides little room for vehicles to slow down and queue if there is any backup when trying to merge onto Florida Avenue. The preferred alternative proposes widening the ramp from one to two lanes as well as lengthening the ramp to provide a wider curve. The loop ramp terminates at Florida Avenue at a proposed signalized intersection. The proposed loop ramp includes two 12-foot wide ramp lanes and will remain on structure beyond the existing exit ramp 6B to provide an open area underneath for mixed use and to promote pedestrian travel. Approximately 300 feet north of Florida Avenue, the ramp widens to three lanes to provide more vehicle storage and efficient queue dispersion onto Florida Avenue. The increased ramp length as well as the additional lanes will minimize backup and potential vehicle queueing onto the Selmon Expressway. The preferred alternative includes a 10-foot wide sidewalk on the inside edge of the proposed loop ramp, crossing underneath the ramp at the location of the existing exit ramp 6B. Pedestrians will have the ability to cross the loop ramp, to access Channelside Drive, at a proposed crosswalk. No right of way (ROW) is required to construct the proposed loop ramp.

Stormwater Management Ponds

The Preferred Alternative has five proposed stormwater ponds. **Figure 1.3** depicts the locations of the ponds. The size of Pond No.1, No. 2, No. 3, No. 4, and No. 5 are 0.25 acres, 0.60 acres, 0.33 acres, 0.80 acres, and 0.25 acres, respectively. The proposed ponds were reviewed and assessed and the results are provided in **Section 5** of this Contamination Screening Evaluation Report (CSER).

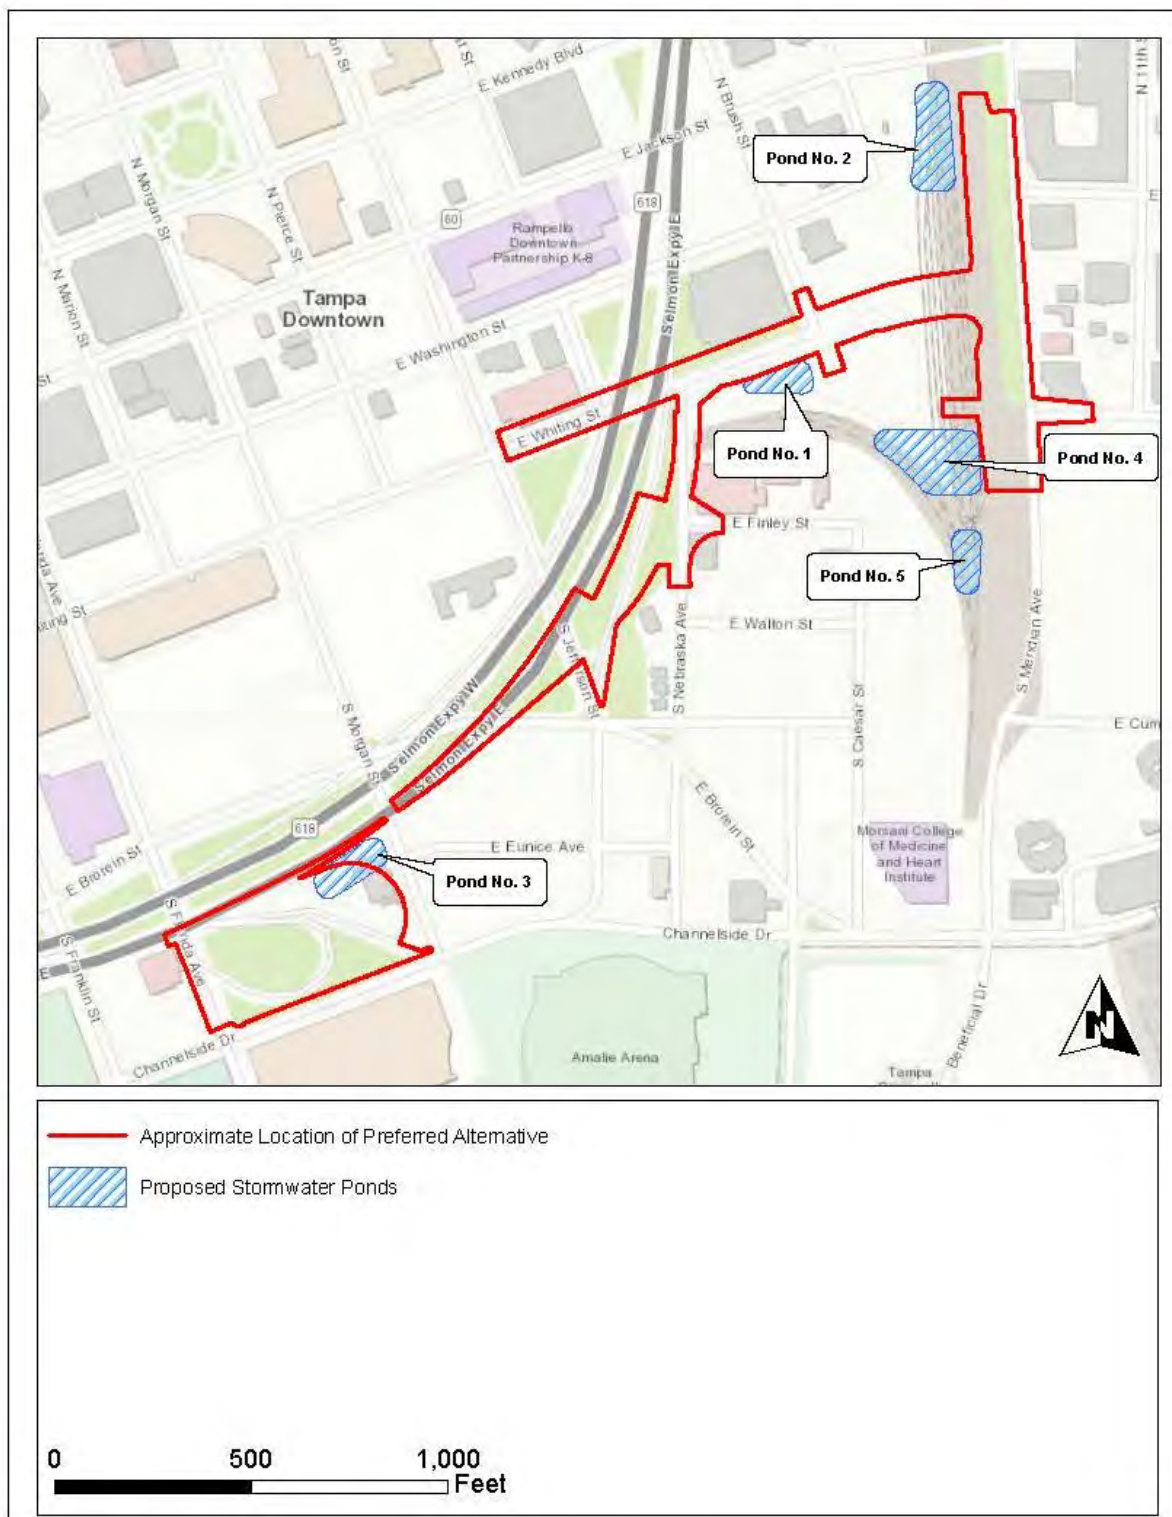

Figure 1.3: Proposed Stormwater Ponds

2.0 Screening Methodology

The purpose of this report is to present the findings of a contamination screening evaluation for the Whiting Street improvements from Jefferson Street to North Meridian Avenue, including the reconfiguration of the Selmon Expressway on-ramps at Jefferson Street and off-ramps at Florida Avenue and Channelside Drive. This report identifies and evaluates known or potential contamination concerns, issues, presents recommendations to address these concerns, and discusses possible project impacts or impacts to the proposed project.

Federal Highway Administration (FHWA) Technical Advisory T 6640.8A (dated October 30, 1987) provides the following guidance on the evaluation of contamination and hazardous waste as the evaluation pertains to highway planning and environmental review:

"Hazardous waste sites are regulated by the Resource Conservation and Recovery Act (RCRA) and the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). During early planning, the location of permitted and non-regulated hazardous waste sites should be identified. Early coordination with the appropriate Regional Office of the EPA [the US Environmental Protection Agency] and the appropriate State agency will aid in identifying known or potentially hazardous waste sites. If known or potential waste sites are identified, the locations should be clearly marked on a map showing their relationship to the alternatives under consideration. If a known or potential hazardous waste site is affected by an alternative, information about the site, the potential involvement, impacts and public health concerns of the affected alternative(s) and the proposed mitigation measures to eliminate or minimize impacts or public health concerns should be discussed in the draft EIS [Environmental Impact Statement].

If the preferred alternative impacts a known or potential hazardous waste site, the final EIS should address and resolve the issues raised by the public and government agencies."

To implement the above guidance, the Florida Department of Transportation (FDOT) authored Part 2, Chapter 20 of the PD&E Manual (revised July 1, 2020), which identifies and explains the purpose, process and procedure by which environmental contamination screening for a project should be conducted. This Contamination Screening Evaluation Report (CSER) has been prepared in accordance with the FHWA's Technical Advisory and the FDOT's PD&E Manual.

The preliminary screening (referred to as a Level I assessment)¹ was performed for Whiting Street from North Jefferson Street to North Meridian Avenue, as well as the on-ramp to the Selmon Expressway at Jefferson Street and the off-ramps at Florida Avenue and Channelside Drive, to identify potential contamination issues within the proposed project limits. The evaluation consisted of, but was not limited to, the following tasks:

- **Agency Records and Data Collection** – historic and current records/data were collected from various agencies and online sources.
- **Aerial Photographs and Topographic Maps Review** – A review of aerial photographs and topographic maps (including historical aerials/maps) was performed.

¹ A Level I contamination screening evaluation consists of a desktop review of current and historical records and site reconnaissance to identify past and present activities that have the potential to impact areas in, or immediately adjacent to, project construction. It is used to determine the need and scope of further assessments. Level I evaluation is completed as early as feasible in the project process, typically during the PD&E phase or during preparation of Phase I (30%) design plans for projects which do not have a PD&E Study.

- **Site Reconnaissance** – A field review was conducted to identify additional potential sources within the vicinity of the project.
- **Risk Rating Determination** – A contamination risk rating (i.e., No/Low, Medium, or High) was assigned for each potentially contaminated site or property.

2.1 Agency Records and Data Collection

A report was obtained from Environmental Data Resources (EDR), Inc. (dated July 13, 2021) that identifies sites that are registered with various county, state, and federal agencies that are known or suspected to have potential contamination issues. Additional records and data were obtained from agencies including the Florida Department of Environmental Protection (FDEP), Southwest Florida Water Management District (SWFWMD), and Plan Hillsborough, an agency that serves the Hillsborough County City-County Planning Commission, the Hillsborough County Metropolitan Planning Organization and the Hillsborough River Interlocal Planning Board.

Appendix B provides the report from EDR. A buffer distance of one mile from the ROW was used for the EDR records search; however, only records for sites within 500 feet, 1,000 feet, and ½ mile of the ROW are presented and discussed within this report. Per the PD&E guidelines, the search buffers, by site type, were as follows:

- 500 feet from the ROW line for petroleum, drycleaners, and non-petroleum sites.
- 1,000 feet from the ROW line for or non-landfill solid waste sites (such as recycling facilities, transfer stations and debris placement areas).
- A half mile from the ROW line for CERCLA, National Priority List (NPL) Superfund sites, or landfill sites.

The primary environmental databases that were searched are listed in **Table 2.1**. Notably, because sufficient information was readily available from the databases search, as well as the historical aerial photographs and topographic maps aerial reviews described below, interviews with past and present owners of properties were not conducted.

Table 2.1: Environmental Records Search Databases

Agency	Databases

2.2 Aerial Photographs and Topographic Maps Review

To support and supplement the environmental records search, historical aerial photographs and topographic maps of the project area were reviewed to ascertain whether or not historical land uses would be of potential contamination risk during project implementation. The aerial photographs and topographic maps that were reviewed are provided in **Appendix C** of this CSER and are described in **Table 2.2** below.

Table 2.2: Historical Aerial Photographs and Topographic Maps

Date	Description
1938	Aerial shows land use is predominantly industrial and commercial with some residential. Railroad is present just south of Whiting Street and along North Meridian Avenue.
1944	Topographical map shows railroad features described in 1938.
1947	Topographical map shows land uses unchanged from 1944 conditions.
1956	Topographical map shows land uses unchanged from 1947 conditions.
1957	Aerial shows additional industrial/commercial development since 1938 with railroad remaining active in same locations described in 1938.
1965	Aerial shows similar industrial/commercial land uses as shown in 1957, with no residential land use. Railroad is active in same locations described in 1938.
1969	Aerial and topographical maps show land uses unchanged from 1965 conditions.
1973	Aerial shows land uses unchanged from 1969 conditions.
1976	Aerial shows similar land uses as 1973 conditions. However, the aerial also shows the construction of the southern portion of the Selmon Expressway ending at S Morgan Street and Channelside Drive. Railroad is still active in locations described in 1938.
1979	Topographical map shows land uses unchanged from 1976 conditions.
1980	Aerial shows active construction of the Selmon Expressway further north across Whiting Street. Railroad is still active just south of Whiting Street, but the new Selmon Expressway has replaced a portion of the railroad.
1981	Topographical map shows land uses unchanged from 1980 conditions.
1987	Aerial shows completed Selmon Expressway extending north across and beyond Whiting Street. Land use remains primarily industrial/commercial.
1991	Aerial shows similar land use from 1987 with an active railroad just south of Whiting Street and east of the Selmon Expressway, and along North Meridian Avenue. Development of sky-rise buildings is also shown to the west of the Whiting Street project.
1995	Aerial and topographical map shows similar industrial and commercial land use from 1991. Aerial also shows construction of the current Amalie Arena and nearby Channelside Drive businesses. Railroad is no longer present just south of Whiting Street.
2007	Aerial shows less industrial and more commercial/business land use as opposed to previous years. The waterfront property just south of the arena has been developed for more residential and business use. Most of the land just south and east of the Whiting Street project is vacant. Aerial also shows current stormwater pond near the corner of East Whiting Street and North Brush Street.
2010	Aerial shows similar land use from 2007, with additional residential development just east of North Meridian Avenue. Railroad is active along North Meridian Avenue.
2012	Topographical map shows land uses unchanged from 2010 conditions.
2017	Aerial shows similar land use from 2012, with new residential development south of Whiting Street and west of the Selmon Expressway. Additional residential development is also shown east of North Meridian Avenue. Railroad is active along North Meridian Avenue.

Source: Crawford, Murphy & Tilly, Inc., August 2021.

2.3 Site Reconnaissance

A site reconnaissance of the project area and its vicinity was conducted on August 9, 2021, to identify additional potential contamination concerns. Based on the field investigation no additional potential contamination concerns were identified.

2.4 Risk Rating Determination

Contaminants were identified consistent with the definitions of the FDOT PD&E Manual. Using the explanations of the risk categories in the PD&E Manual, the sites identified from environmental records and site reconnaissance as having the potential for contamination received a risk rating of “No/Low”, “Medium” or “High”, as described below:

- **No** - A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants had been handled on the property. However, findings from the contamination screening evaluation or sampling and testing results indicate that contamination impacts are not expected.
- **Low** - A review of available information indicates that former or current activities on the property have an ongoing contamination issue, has a hazardous waste generator identification (ID) number, or handles hazardous materials in some capacity. However, based on the review of conceptual or design plans and/or findings from the contamination screening evaluation or sampling and testing results, it is not likely that there would be any contamination impacts to the project.
- **Medium** - After a review of conceptual or design plans and findings from a contamination screening evaluation or sampling and testing results, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a “Medium”. Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.
- **High** - After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications to ROW acquisition or have other potential transfer of contamination related liability.

3.0 Land Uses

Historic and existing land uses provide an indication of the potential for contamination on a given property. For example, a site that is currently residential but was once in commercial use or a site that is currently being used commercially has a greater potential for contamination than a site for which the historic and current land use is undisturbed land. The following presents the findings from the review of historic and existing land uses within the vicinity of the project.

3.1 Historic Land Use

The historic land uses of the project study area were identified using aerial images as well as a review of SWFWMD. The historic land uses and their respective acreages are summarized in **Table 3.1** below and are illustrated graphically in **Appendix D**. As shown, the majority of historic land use types within a ½ mile of the project corridor are commercial and services, transportation, and bay and estuaries.

Table 3.1: Historic Land Use

Description	Acres	% Total
Bay and Estuaries	169	17
Commercial and Services	281	29

Wetland Forested Mixed	1	<1
Total:	947	100

Note: Historic land use data represents year 1995.

Source: Southwest Florida Water Management District (SWFWMD), August 2021.

3.2 Existing Land Use

The existing land use data reported by Plan Hillsborough reveals a variety of land uses within ½ mile of the proposed project corridor. These land uses and their respective acreages are summarized according to land use designations in **Table 3.2** below and are provided graphically in **Appendix D**. As shown, the majority of existing land use types within a ½ mile of the project corridor are public/quasi-public/institutions, light commercial, and multi-family.

Table 3.2: Existing Land Use

Description	Acres	% Total

Vacant	39	6
Total:	603	100

Note: Existing land use data represents year 2021.

Source: Plan Hillsborough, June 2021.

4.0 Hydrologic Features

The hydrologic and soil characteristics of the project area can effect how contaminant plumes move, collect, or disperse into the surrounding soil and water. The topography, previously discussed in **Section 2.2** of this CSER can also effect plumes.

4.1 Hydrology

The United States Geological Survey's (USGS's) digital elevation model (DEM) indicates a slight southeast topographic gradient with a depressional area in the vicinity of Garrison Canal, which may be indicative of the direction of groundwater flow in the project area.

The Federal Emergency Management Agency's (FEMA's) Flood Insurance Rate Map (FIRM) classifications provide insight on a geographic area's location within established floodplains, including an estimated chance of having flood levels established for a given floodplain(s) exceeded within a given year. According to the most recently available FIRM, 476 acres within a half mile of the project corridor is an area with minimal flood hazard, with the remainder (i.e., 499 acres) defined as being subject to inundation by the one-percent-annual-chance flood event. These areas are also identified as Special Flood Hazard Zones (SFHA). Moreover, portions of the project area to the south and east, are considered part of the 100-year floodplain.

The United States Fish and Wildlife Service (USFWS) maintains the National Wetland Inventory (NWI) and based on their current inventory map, 178 acres of NWI-designated wetlands have been mapped within ½ mile of the preferred alternative. The NWI area is comprised of estuarine and marine deepwater, estuarine and marine wetland, freshwater forested / shrub wetland, freshwater pond, and riverine.

The EDR reports 30 state and federal wells (e.g., public water supply wells) within a mile of the project corridor. Of these, five are present within 500 feet of the ROW. These are depicted and detailed in **Appendix B**.

Finally, a 1.9-acre manmade retention pond is located at the southeast corner of East Whiting Street and North Brush Street.

4.2 Soil

Data available from the U. S. Department of Agriculture Natural Resource Conservation Service's Soil Survey Geographic Database (SSURGO) for Hillsborough County are summarized in **Table 4.1**. As shown, the majority of soil types within a half mile of the proposed corridor are urban land, water, and St. Augustine.

Table 4.1: Project Area Soil Classifications

Description	Acres	% Total
Malabar	17	2
Myakka	30	3
St. Augustine	104	11
Tavares	<1	<1
Urban Land	647	66
Water	176	18
Total:	974	100

Source: U. S. Department of Agriculture, Natural Resource Conservation Service's Soil Survey Geographic Database (SSURGO), revised in 2018.

5.0 Project Impacts

A total of 98 sites were identified, evaluated, and given a risk rating of either “No/Low”, “Medium”, or “High”. A list of the sites is provided in **Appendix E**. The following summarizes the ratings:

- **No/Low-Risk Sites:** There are 37 sites that are considered to have no or little likelihood of posing environmental contamination problems to the project. These sites are reported to have past and/or current land uses, regulatory records or other indicators of hazardous materials, spills or together potential sources of environmental contamination. However, the collected information combined with the distance and direction from the project corridor preclude significant impacts. The No/Low-Risk sites include solid waste disposal facilities, small quantity hazardous waste generators, facilities with air pollution and national pollution discharge elimination system (NPDES) permits, and sites of minor spills.
- **Medium-Risk Sites:** There are 26 sites that are viewed as having the potential to pose a medium-risk of contamination for the project. These sites were rated medium because there is insufficient information to make a determination as to the potential for contamination impact, and there is a reasonable suspicion that contamination may exist. However, based on what is known about the site, in combination with other relevant factors (e.g., land use, distance to the project, types of contamination), the risks of environmental contamination impacts to the project are reduced. These sites primarily include historic gas stations, facilities with underground storage tanks (USTs) with reported spills and light industrial facilities. For these sites, it is recommended that more detailed investigations be conducted, as necessary, to further ascertain the potential impacts.
- **High-Risk Sites:** There are 35 sites that are determined to have a high likelihood of contamination impacts to the project. The high-risk rating was based on agency records of past environmental practices and incidents, and the close proximity of these sites to the project corridor. The sites include historical gas stations and dry cleaning facilities, reported leaking underground storage tanks, motor vehicle servicing facilities with reported fuel spills, brownfield cleanup sites, and various historical industrial facilities. Among the sites there are three sites that are listed in the US EPA’s verified potentially responsible parties (PRP) database and are also on the final NPL. In all cases, the primary risk stems from the potential for underground migration of contaminants through soil, surface, and groundwater from the site to the project corridor. For these sites, further evaluation of the potential impacts of contamination on the project are warranted in the form of Level II or III assessments.²

² A Level II assessment, also known as Impact to Construction Assessment (ICA), consists of a detailed evaluation of potential contaminated sites based on the findings of Level I evaluation. A Level II assessment may include soil sampling, laboratory testing and/or installation of groundwater monitoring wells for sites with known or potentially contaminated materials. This is done to assess the type and extent of contamination in potentially contaminated sites, identify impacts to construction and associated costs for remediation, and to develop recommendations for Level III activities or avoidance measures as warranted. Level II assessment is typically performed during the design phase and prior to ROW acquisition and Construction. However, it may be performed during the PD&E phase for projects with advanced design activities or when it is required to substantiate the impact of potentially contaminated sites on the preferred alternative. A Level III refers to additional evaluation of contamination identified or suspected based on the Level II assessment and any requisite remediation or abatement of contamination or hazardous materials. It includes a detailed plan for the removal and disposal of contaminated media, storage tanks, and/or other hazardous materials that may directly impact construction activities or ROW acquisition and clearance. Level III activities can occur during design and ROW acquisition, or during or prior to construction to avoid impacts to construction and project delays.

The sites categorized as either “No” or “Low” risks were categorized as such for the following reasons: (i) the reported involvement with hazardous wastes, fuel and/or other regulated substances was minimal and/or (ii) the distance and direction between a site and the project corridor likely precludes significant impact.

Table 5.1 is a summary listing of the Medium- and High-Risk contamination sites. A photo of each site, the site name and address, the database(s) in which the site listed, and a site description are provided. Each site was also assigned a numerical identifier (e.g., 1, 2, 3) and the site locations are illustrated on a map of the project area (**Figure 5.1**). Site photos are provided in **Appendix F**.

As stated in **Section 1.0** of this CSER and illustrated on **Figure 1.3**, there are five proposed stormwater ponds associated with the preferred alternative. The proximity of the Medium- and High-Risk sites to the five ponds is illustrated on **Figure 5.1**.

A Medium-Risk site (i.e., Site 29) consisting of an industrial facility is located within 100 feet south of proposed Pond No. 1 (located near the southeast corner of East Whiting Street and South Nebraska Avenue). This pond site is also less than 200 feet from two High-Risk sites (i.e., Sites 2 and 4), that have historic industrial and auto facilities. Active railroad tracks are also located adjacent to the south side of the pond site.

Pond No. 2 is located over existing railroad tracks just south of East Jackson Street and extends south to East Washington Street. This pond is less than 300 feet from four High-Risk sites (i.e., Sites 28, 38, 45, and 51), that show records of historical auto gas/filling/service stations. Site 28 is also the location of an active automotive shop located within 50 feet of the west side of the pond site. Additionally, this proposed pond site would be located over historic and active railroad tracks (i.e., Site 98).

Pond No. 3, located at the southwest corner of the Selmon Expressway and South Morgan Street, is less than 100 feet away from four High-Risk sites (i.e., Sites 1, 6, 15, and 18), that were historically used as gas/filling/service stations and dry cleaning/laundry facilities. Because the stormwater ponds are located in close proximity to either High-Risk or Medium-Risk contamination sites, further investigation in the project’s design phase is warranted.

Pond No. 4, is located over existing railroad tracks just south of East Whiting Street and west of South Meridian Avenue. This pond is less than 100 feet from two Medium-Risk sites (i.e., Sites 29 and 65), consisting of an industrial facility and a University of South Florida (USF) Medical School facility with a Remedial Action Plan (RAP). Additionally, this proposed pond site would be located over historic and active railroad tracks (i.e., Site 98).

Pond No. 5, is also located over existing railroad tracks just south of East Finley Street and west of South Meridian Avenue. This pond is less than 300 feet from two Medium-Risk sites (i.e., Sites 62 and 65), consisting of a property with a RAP and a USF Medical School facility with a RAP. Additionally, this proposed pond site would be located over historic and active railroad tracks (i.e., Site 98).

Due to the number of potential High- and Medium-rated sites, and the likelihood of these sites having an impact on the design and construction phases of the project, the following should be considered: special handling and disposal of contaminated soil and groundwater, dewatering restrictions, or use of pond liners. For example, if construction requires dewatering due to subsurface work, including construction of any structures or stormwater ponds, the FDEP will require the submittal of a completed Notice of Intent (NOI) to use a NPDES *Generic Permit for Groundwater Discharge from Large and Small Construction Activities*³. The NOI submittal process requires the review of planned dewatering areas to determine if any site within five-

³ Florida Administrative Code (F.A.C.), Rule 62-621.300(2).

hundred feet ($\leq 500'$) is recognized as "contaminated." If a "contaminated" site, or sites, exist(s) within this distance, dewatering activities may be subject to permitting.⁴ Furthermore, pond liners may be required to prevent seeping from proposed stormwater ponds in order to reduce risk of mobilizing potential existing contamination in the soil or groundwater.

Additionally, Site 98 identifies the location of multiple existing railroad tracks currently and historically used to store various railway cars within the project area. These railroad tracks have been in operation for decades and could pose a contamination risk during the construction phase. Residual contamination including herbicides, petroleum products and byproducts, metals, and creosote, is often present because of railroad operations and associated industrial activities. Herbicides used to kill weeds and vegetation along railroads typically contained glyphosate which could cause serious health issues, including cancer. Railroad ties are typically treated with chemicals such as creosote and chromated copper arsenate. Both chemicals are banned for residential use and are potentially harmful to humans and plants. If high levels of contamination are found, a licensed facility that will accept old railroad ties for disposal will need to be identified. The Resource Conservation and Recovery Act (RCRA) is the federal law that creates the framework for the proper management and disposal of hazardous and nonhazardous solid waste. Other potential contamination found along railroad corridors include, but are not limited to, spilled or leaked liquids such as oil, gasoline, diesel fuel, cleaning solvents and detergents from railroad operations which might have caused unforeseen soil and groundwater contamination. Furthermore, roofing shingles and other materials used on railcars could contain asbestos. If this material is present, construction activities could disturb these materials and consequently release asbestos fibers into the air which are known to be harmful to humans.

⁴ F.A.C., Rule 62-621.300(1), or Rule 62-620.910.

78	48	Medium	Channelside/Former Amazon Hose	222 N 12th St.	BROWNFIELDS, FINDS, ECHO, NPDES, VCP, INST CONTROL, ENG CONTROLS, DWM CONTAM, RESP PARTY, CLEANUP SITES	<ul style="list-style-type: none">• Site located within 1,000 ft of ROW.• Facility reported as open and remediation status is reported as active.• Potential for soil and/or groundwater contamination from former operations of chemical, marine fuel and industrial hose supply located on site.• Site contamination consisted of arsenic, polycyclic aromatic hydrocarbons (PAHs), and petroleum hydrocarbons in soil.• Per FDEP in 2018, site successfully and satisfactorily implemented the approved brownfield site rehabilitation completion agreement and no further action is needed.
79	49	Medium	Verizon Wireless - Saint Pete Times Forum	401 Channelside Dr.	RESP PARTY, ICIS, FINDS, ECHO, AST, DWM CONTAM, FL FINANCIAL ASSURANCE 3, TIER 2, ERNS	<ul style="list-style-type: none">• Site located within 1,000 ft of RW.• Site reported as closed.• Historical research documented a railroad spur from the Seaboard Air Line Railroad that was present along the east and south border of the subject property from about 1915 through the mid-1980s. In the 1930s until circa 1979, United Paper Company operated within the central portion of the property. The facility reportedly printed fruit and vegetable labels and appeared to contain a crude oil engine (noted in Sanborn maps). An industrial equipment sales and service facility was also identified in the 1950 Sanborn.• In 2013, a phase II assessment identified the presence of arsenic, lead, benzo(a)pyrene (BaP) equivalent, and dieldrin, concentrations above the applicable SCTLs. The report identified chlordane as also exceeding SCTLs, however, the concentration detected is below the applicable SCTLs. No groundwater contamination was documented.• In 2016, supplemental soil testing was performed and identified an exceedance of BaP equivalent in the soil, but did not identify the presence of arsenic, lead, or organochlorine pesticides above the applicable SCTLs. None of the tested groundwater parameters exceedances of the applicable FDEP GCTLs. Therefore, no further assessment of the groundwater is warranted.• In 2017, an Interim Source Removal Plan (ISR Plan) was submitted to the FDEP which outlined the procedures for removal of the contaminated soil.• In 2018, contaminated soil was removed. An unregulated UST was discovered that was used for fuel oil. A Soil Source Removal Report was prepared to satisfy the requirements for a NFAP. Soil excavation performed removed the contaminated soils that exhibited concentrations of the contaminants of concern exceeding the residential direct exposure and leachability based on groundwater SCTLs. Post remedial groundwater sampling was also performed. The FDEP stated that the site has satisfied rehabilitation requirements and released it from any further obligation to conduct site rehabilitation.
80	50	Medium	The Place at Channelside/Brulin & Company	912 Channelside Dr.	BROWNFIELD, INST CONTROL, RESP PARTY, VCP, DWM CONTAM, SSTS, FINDS, ECHO	<ul style="list-style-type: none">• Site located within 1,000 ft of ROW.• Potential for soil and/or groundwater contamination from chlorinated solvent constituents. There is documentation that contamination above applicable standards or criteria exists offsite.• Former site of Brulin Facility, Records Center, Inc. and CSX Transportation, Inc. ROW which were demolished in 2005. Currently a residential condominium complex that is reported as open.• In 2004, FDEP designated The Place at Channelside a Brownfield Area.• In 2017, FDEP stated that the site has successfully and satisfactorily implemented the approved brownfield site rehabilitation and no further action is needed. Acceptable Alternative Cleanup Target Levels (ACTLs) have been established for groundwater contaminants remaining, in conjunction with appropriate institutional controls.
81	51	Medium	Pinnacle Channelside Crestline Property Area 14	1005 E Cumberland Ave.	RESP PARTY	<ul style="list-style-type: none">• Site located within 1,000 ft of ROW.• Site reported as closed.• In 2016, corrective action plan and Remedial Action Plan (RAP) reported for the site.• No additional information is readily available.
82	52	Medium	Gaspar Property	1029 E Twiggs St.	RESP PARTY, CLEANUP SITES, DWM CONTAM, UST, FL FINANCIAL ASSURANCE 3	<ul style="list-style-type: none">• Site is located within 1,000 ft of ROW.• Facility is reported as closed. However, its remediation status is reported as open.• In 2007, a tank closure report was completed and identified two gasoline USTs were removed that were associated with a former gas station that operated on the site during the 1920s. The report also concluded that there were no environmental impacts associated with the removal of the USTs. No further environmental assessment was recommended at that time.• In 2013, corrective action plan and Remedial Action Plan (RAP) was reported for the site.• No additional information is readily available.
83	53	Medium	Washington Street Crossing Area	E Washington St. & Channelside Dr.	BROWNFIELDS	<ul style="list-style-type: none">• Site located with 1,000 ft of ROW.• Potential for soil and/or groundwater contamination from solvents.• In 2002, site was designated a brownfield area.• In 2003, a site assessment report identified a limited area of solvent impacting soil within the former CSX railroad ROW, groundwater samples discovered concentrations of PCE and TCE above the GCTL in the upper portion of the surficial aquifer. Remediation by Natural Attenuation was recommended, and monitor wells should be retained during future site development activities with a groundwater monitoring plan. Report did not identify any known or unknown on-site or off-site sources of solvent contamination.
84	54	Medium	Tampa Marriott Waterside Hotel & Marina	700 S Florida Ave.	INST CONTROL, ENG CONTROLS, RESP PARTY,	<ul style="list-style-type: none">• Site located within 1,000 ft of ROW.• Facility reported as closed.

6.0 Summary and Recommendations

This CSER was prepared in accordance with the FHWA's Technical Advisory T 6640.8a (dated October 30th, 1987) and following procedures described in the FDOT's PD&E Manual, Part 2, Chapter 20 (revised July 1, 2020). A Level I CSER consists of a desktop review of current and historical records and site reconnaissance to identify past and present activities that have the potential to impact the project area and the area immediately adjacent to the project. The purpose of the Level I CSER is to determine the need for further assessment.

Consistent with FDOT's guidance and based on environmental records searches, land use surveys, field surveys and other screening methodologies cited within the PD&E Manual, 76 potential contamination sites were identified within 500 feet, 17 potential contamination sites within 500 to 1,000 feet, and 5 potential contamination sites from 1,000 feet to ½ mile of the project corridor— a total of 98 potential properties with contamination.

Of the 98 sites, 37 were identified as having a "No/Low" contamination risk, 26 were identified as having a "Medium" contamination risk, and 35 sites were identified as having a "High" contamination risk. Based on FDOT's guidelines, sites identified as "Medium and High" during a Level I evaluation should be further evaluated during a project's design phase (a Level II evaluation). Further evaluation of the sites ranked as "No/Low" is not recommended during the design phase of a project unless changes are made to the project design that change the location or alignment of the proposed improvements. This follow-up work should be undertaken during the project's design phase before ROW acquisition. In this way, the construction of the proposed roadway improvements will not worsen contamination conditions and preparations can be made to mitigate any potential impact. Coordination with a Contamination Assessment & Remediation (CAR) Contractor to perform Level-II testing of suspect areas and determine if contamination impacts exist in areas of subsurface construction should be considered for all High- and Medium-rated sites prior to the project's construction phase.

As part of the project, there are five proposed stormwater ponds. All five ponds are located within 300 feet of either High-Risk or Medium-Risk sites, a circumstance that also warrants further investigation in the project's design phase. As stated in **Section 5**, permits may be required due to potential dewatering activities, and pond liners may also be needed to mitigate soil and groundwater contamination.

Furthermore, potential contaminated railroad ties should be removed and disposed of at a licensed facility. The most common methods for mitigating soil and groundwater contamination associated with railroad activities and operations is to remove the contaminated soil and replace it with clean fill and/or capping the surface with asphalt and/or cement to cover up contaminated soils.

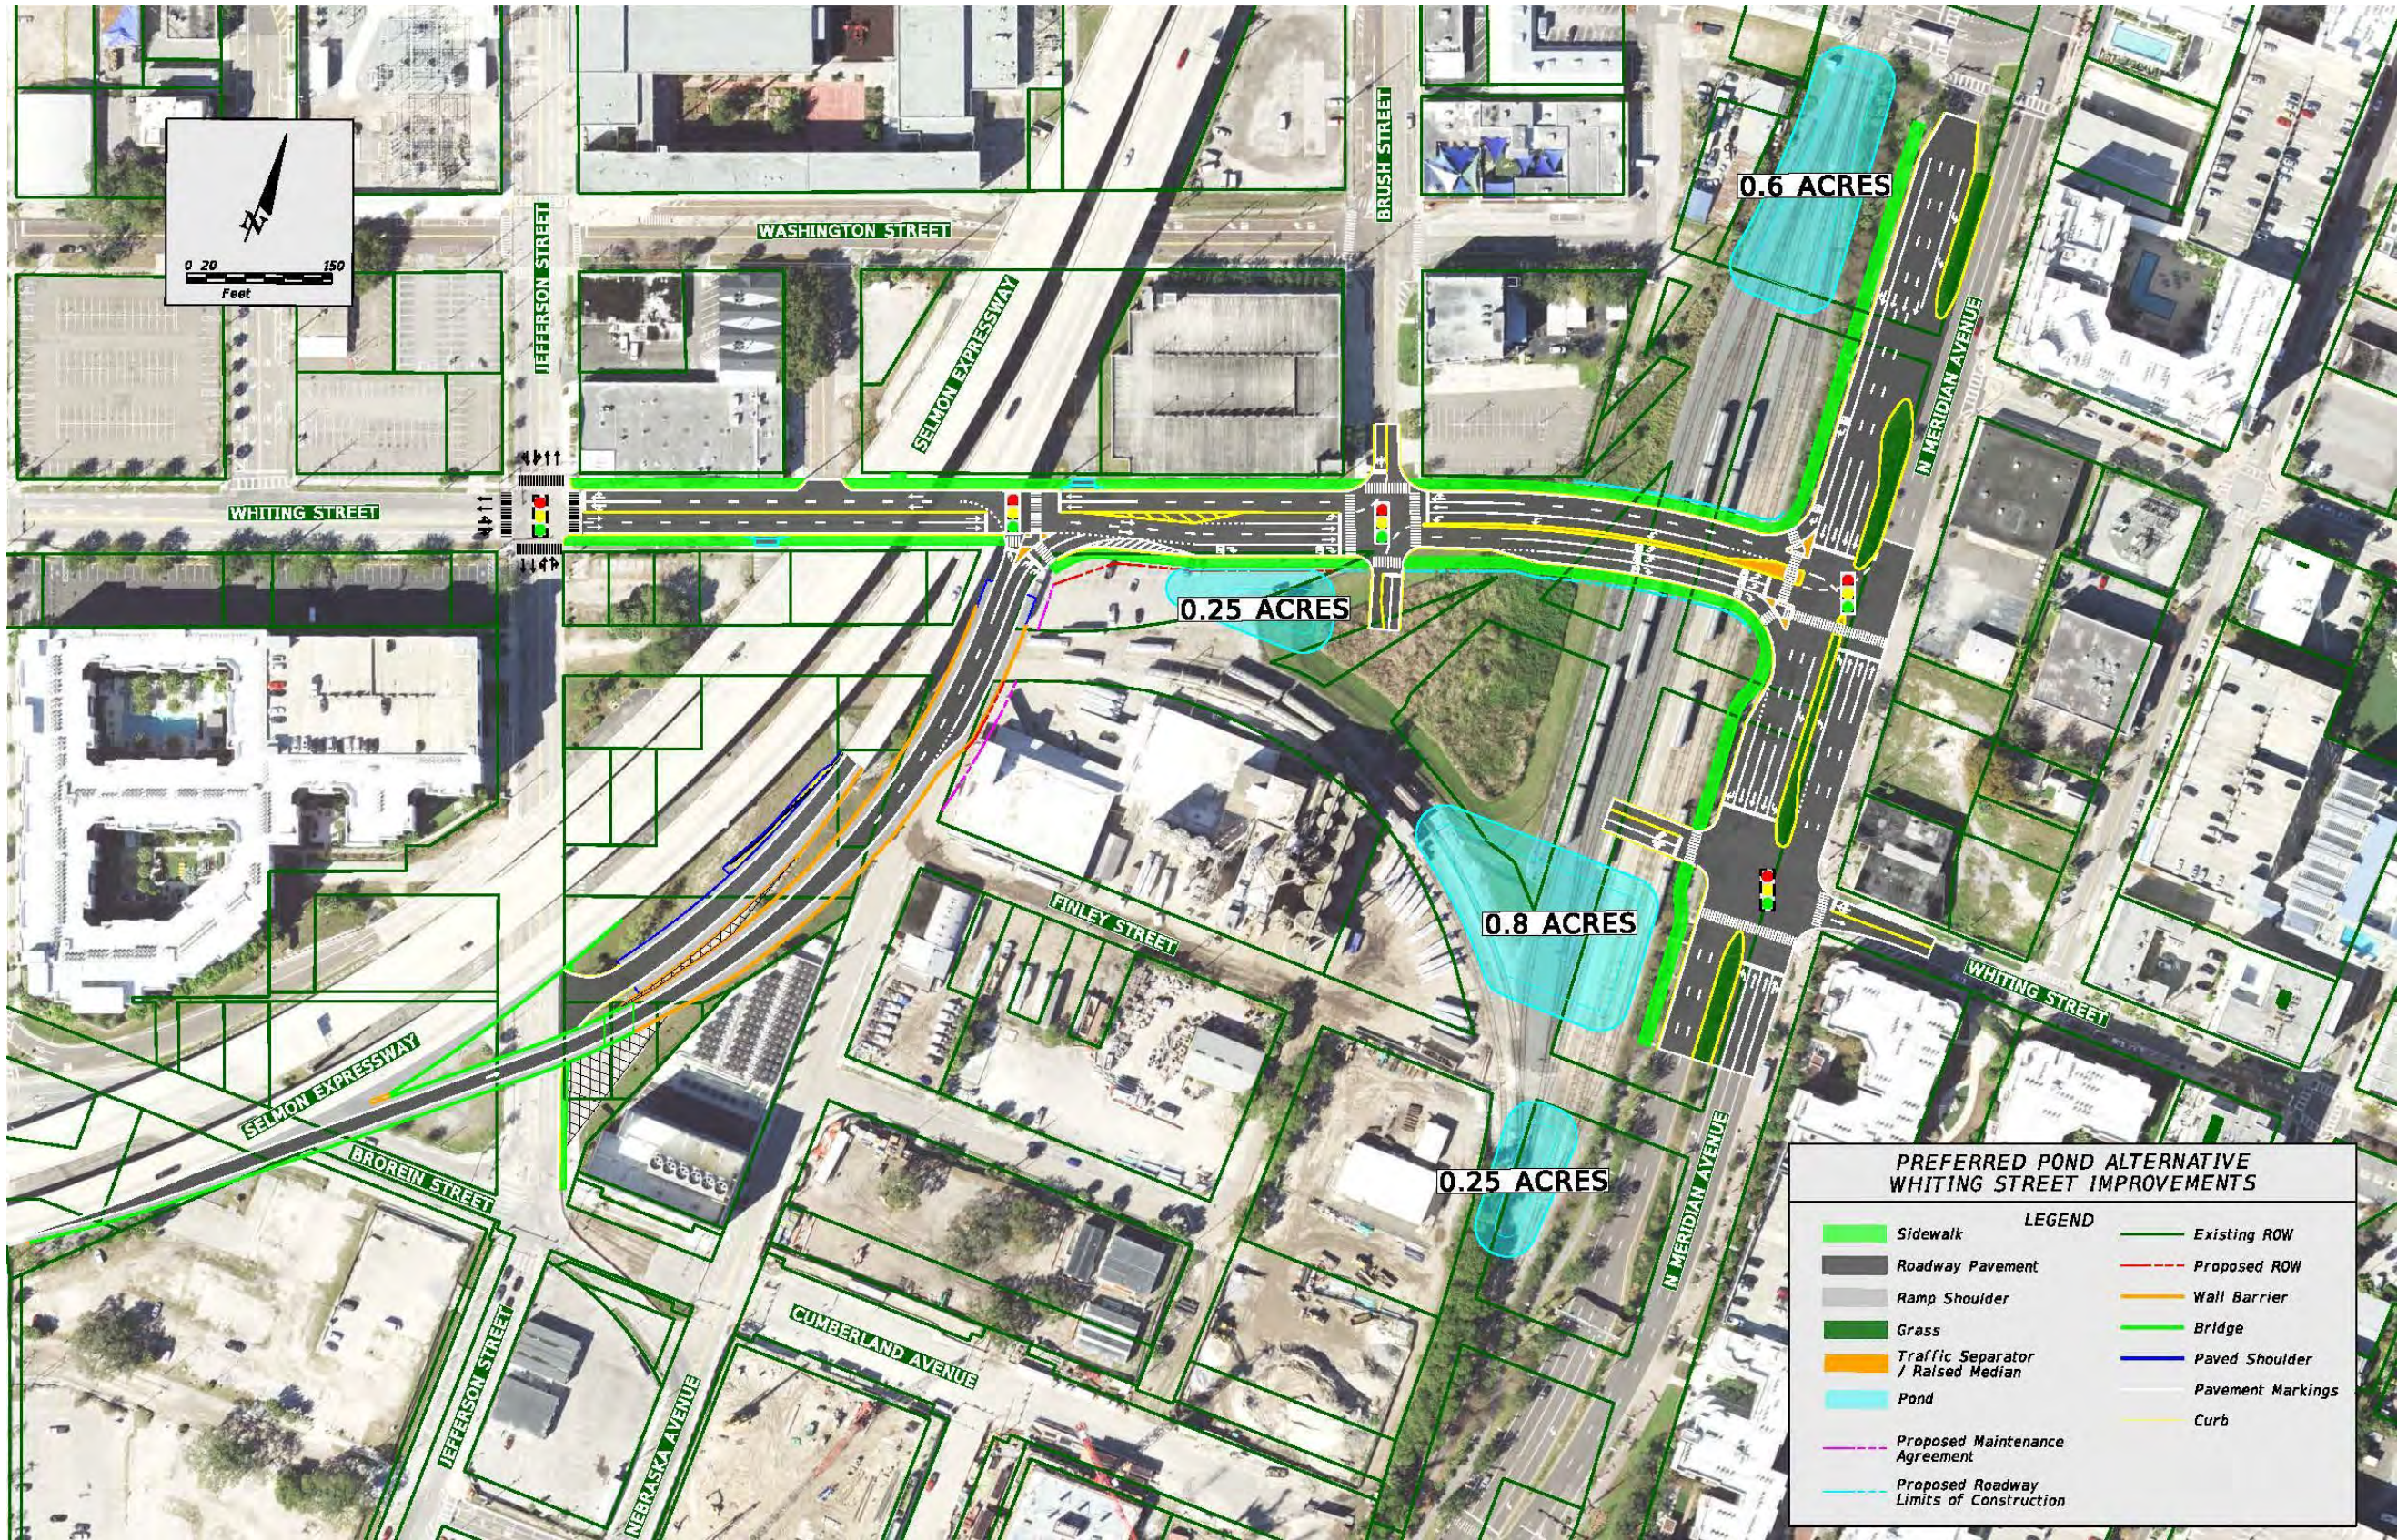

Notably, no CSER can wholly eliminate the uncertainty regarding the potential for environmental contamination in connection with a property, facility or site. Therefore, this evaluation is intended to reduce, but not eliminate, the uncertainty regarding the potential for environmental contamination impacts associated with the project.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

FL RGA HWS..... Recovered Government Archive State Hazardous Waste Facilities List

EXECUTIVE SUMMARY

FL RGA LF..... Recovered Government Archive Solid Waste Facilities List

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 04/27/2021 has revealed that there are 2 SEMS sites within approximately 1 mile of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status

EXECUTIVE SUMMARY

indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 04/27/2021 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 7 RCRA-LQG sites within approximately 0.75 miles of the target property.

EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 16 RCRA-SQG sites within approximately 0.75 miles of the target property.

EXECUTIVE SUMMARY

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 60 RCRA-VSQG sites within approximately 0.75 miles of the target property.

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 03/22/2021 has revealed that there are 52 ERNS sites within approximately 0.5 miles of the target property.

State- and tribal - equivalent CERCLIS

FL SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Florida's State-Funded Action Sites list.

A review of the FL SHWS list, as provided by EDR, and dated 01/13/2020 has revealed that there is 1 FL SHWS site within approximately 1.5 miles of the target property.

State and tribal landfill and/or solid waste disposal site lists

FL SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the FL SWF/LF list, as provided by EDR, has revealed that there are 8 FL SWF/LF sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

FL LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Environmental Protection's PCTO1--Petroleum Contamination Detail Report.

A review of the FL LUST list, as provided by EDR, and dated 01/25/2021 has revealed that there are 149 FL LUST sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Facility Status: CLOSED
Facility-Site Id: 8735470

FL LAST: The file for Leaking Aboveground Storage Tanks. Please remember STCM does not track the source of the discharge so the agency provides a list of facilities with an aboveground tank and an open discharge split by facilities with aboveground tanks only and facilities with aboveground and underground tanks.

A review of the FL LAST list, as provided by EDR, and dated 02/01/2021 has revealed that there are 6 FL LAST sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

FL FF TANKS: A listing of federal facilities with storage tanks.

A review of the FL FF TANKS list, as provided by EDR, and dated 03/29/2021 has revealed that there is 1 FL FF TANKS site within approximately 0.75 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
US FEDERAL COURTHOUS Facility Status: OPEN Facility Id: 9501854	801 N FLORIDA AVE #6	NW 1/4 - 1/2 (0.450 mi.)	AP874	2170

FL UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the FL UST list, as provided by EDR, has revealed that there are 136 FL UST sites within approximately 0.75 miles of the target property.

FL AST: Shortly after the Sept 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the FL AST list, as provided by EDR, has revealed that there are 77 FL AST sites within approximately 0.75 miles of the target property.

State and tribal Brownfields sites

FL BROWNFIELDS: Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination.

A review of the FL BROWNFIELDS list, as provided by EDR, has revealed that there are 30 FL BROWNFIELDS sites within approximately 1 mile of the target property.

Local Brownfield lists

EXECUTIVE SUMMARY

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 03/15/2021 has revealed that there are 11 US BROWNFIELDS sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Local Lists of Hazardous waste / Contaminated Sites

Florida Priority Cleaners list comes from the Department of Environmental Protection.

A review of the FL PRIORITYCLEANERS list, as provided by EDR, and dated 10/26/2020 has revealed that there is 1 FL PRIORITYCLEANERS site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
EL ENCANTO CLEANERS Facility-Site Id: 9500225	1818 N 15TH ST	NNE 1/2 - 1 (0.859 mi.)	CN1238	3876

FL FI Sites: This summary status report is a compilation and revision of other existing lists. It was developed from a number of lists including the Eckhardt list, the Moffit list, the EPA Hazardous Waste Sites list, EPA's Emergency and Remedial Response Information System list (RCRA Section 3012), and existing department lists such as the Obsolete Uncontrolled Hazardous Waste Sites list. The purpose of this list is to track the progress of activities within and outside the department as they relate to the listed sites. It is not a list of uncontrolled sites or sources causing environmental contamination. The Sites List comes from the Department of Environmental Protection.

A review of the FL FI Sites list, as provided by EDR, and dated 12/31/1989 has revealed that there are 3 FL FI Sites sites within approximately 1.5 miles of the target property.

EXECUTIVE SUMMARY

FL SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the FL SPILLS 90 list, as provided by EDR, and dated 12/10/2012 has revealed that there are 2 FL SPILLS 90 sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 36 RCRA NonGen / NLR sites within approximately 0.75 miles of the target property.

EXECUTIVE SUMMARY

SSTS: Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

A review of the SSTS list, as provided by EDR, and dated 01/20/2021 has revealed that there are 2 SSTS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ICIS: The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

A review of the ICIS list, as provided by EDR, and dated 11/18/2016 has revealed that there are 9 ICIS sites within approximately 0.5 miles of the target property.

FTTS: FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act) over the previous five years. To maintain currency, EDR contacts the Agency on a quarterly basis.

A review of the FTTS list, as provided by EDR, has revealed that there are 9 FTTS sites within approximately 0.5 miles of the target property.

HIST FTTS: A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A review of the HIST FTTS list, as provided by EDR, has revealed that there are 9 HIST FTTS sites within approximately 0.5 miles of the target property.

US AIRS: The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

A review of the US AIRS list, as provided by EDR, has revealed that there are 9 US AIRS sites within approximately 0.5 miles of the target property.

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 02/03/2021 has revealed that there are 195 FINDS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ECHO: ECHO provides integrated compliance and enforcement information for about 800,000 regulated facilities nationwide.

A review of the ECHO list, as provided by EDR, and dated 04/04/2021 has revealed that there are 138 ECHO sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

FL DEDB: Ethylene dibromide (EDB), a soil fumigant, that has been detected in drinking water wells. The amount found exceeds the maximum contaminant level as stated in Chapter 62-550 or 520. It is a potential threat to public health when present in drinking water.

A review of the FL DEDB list, as provided by EDR, and dated 06/22/2021 has revealed that there are 4 FL DEDB sites within approximately 0.75 miles of the target property.

FL HW GEN: Small Quantity Hazardous Waste Generators are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities greater than 100 Kg but less than 1,000 Kg in any one calendar month. Large Quantity Generators of Hazardous Waste are tracked in this coverage based on their notification to the Department of Environmental Protection as to their handler status, or based on inspections conducted at their facilities. These facilities are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities equal to or greater than 1,000 Kg in any one calendar month.

A review of the FL HW GEN list, as provided by EDR, and dated 03/23/2021 has revealed that there are 13 FL HW GEN sites within approximately 0.75 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1.5 miles of the target property.

PEOPLES GAS SYSTEM	1200 NORTH 13TH STRE	NNE 1/2 - 1 (0.522 mi.)	BC1003	2552

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 160 EDR Hist Auto sites within approximately 0.625 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 107 EDR Hist Cleaner sites within approximately 0.625 miles of the target property.

EXECUTIVE SUMMARY

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

FL RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Protection in Florida.

A review of the FL RGA LUST list, as provided by EDR, has revealed that there are 57 FL RGA LUST sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is

ARDENT MILLS, LLC (Continued)

1004459122

used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

FINDS:

Registry ID: 110005632100

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click Here:

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Click Here:

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR - NOT APPLICABLE

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

TSCA SUBMITTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR EMISSIONS CLASSIFICATION UNKNOWN

TSCA SUBMITTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

COMMUNITY WATER SYSTEM
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Florida Environmental System Today Application (FIESTA) Data Maintenance (FDM) system maintains entity, environmental interest and affiliation data for the State of Florida.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
